

Table of contents

1 Setup	2
1.1 What is the problem?	2
1.2 just a test	2
Unnnumbered	3

1 Setup

1.1 What is the problem?

Note

The Problem is:

- if you crossref in an `{.unnumbered}` section, and use `[-@sec-something]`, then in HTML you wont get an abbreviation

1.2 just a test

Here, within a numbered section, everything works

See Section [1.1](#) and [1.2](#) and even foo [1](#).

Unnnumbered

! Important

This is a unnumbered Section. While everything goes well in PDF / LaTeX, have a look at the HTML output.

See Section [1.1](#) and [1.2](#) and even foo [1](#).
